How to use BLHeli Pass-Through for brushless Silverware quads

1. Prepare the board (this is not needed for our dedicated brushless boards).

I'll describe here how to prepare a BWhoop board, but the other boards should work smililarly. Be aware that relative fine soldering is needed - but don't be afraid, you only need to remove some stuff from the board. A hot air gun or second soldering iron is helpful, but not needed.
